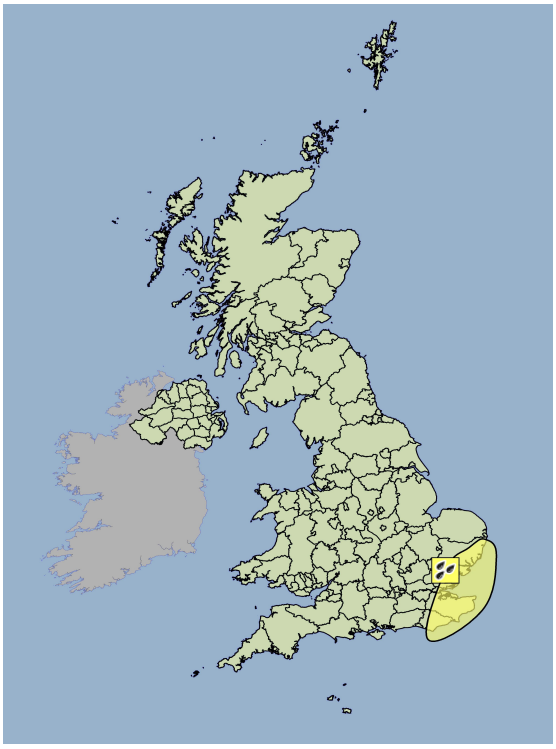
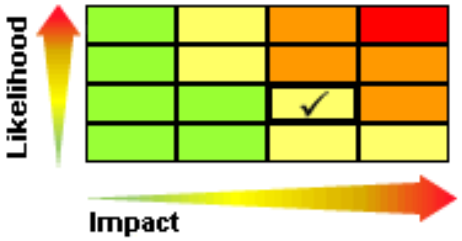
National Severe Weather Warning Service





Chief Forecasters Assessment
The frontal system that brought Wednesday's rainfall is now moving out across the North Sea, but leaves a residual risk of some heavy bursts of rain across the far southeast of England. 15 to 20 mm rainfall could fall in less than an hour locally, leading to a risk of some surface water flooding. This risk will diminish from the west over the next few hours.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **22:30 on Wed, 16th Sep 2015** until **01:00 on Thu, 17th Sep 2015**

Further bursts of heavy rain are likely over the next few hours, becoming increasingly confined to the far southeast of England.

The public should be aware of the potential for some isolated surface water flooding, before the risk recedes soon after midnight.

This is an update to the warning originally issued on Tuesday to confine the warning area to the far southeast of England and bring forward the end time.
